**Task:**
Create an application that provides REST API for the following requests:
1. List of common holidays for the two given countries and the given year:
   http://localhost:8080/myperfectapp/LV/UK/2021
2. Result would be a list of dates with holiday names for both countries
3. As a source of data please use the public REST API: https://date.nager.at/
4. You do not need to cache/load/store data, each request to your REST API can result in a request to https://date.nager.at/.
5. Add swagger
6. Add unit tests

**Non-functional requirements:** Java 11 or higher, Spring Boot as a framework, Maven as a build tool

**Deliverables:**
1) Link to a github or gitlab repository
2) Description on how to run your program
